# WASTEWATER RECLAMATION

CLIENT SUCCESS STORY

## Victor Valley Wastewater Reclamation Authority achieves Success with eLogger®

**Client**

Victor Valley Wastewater Reclamation

**Industry**

Water/Wastewater

**Location**

Victorville, CA

**Number of Locations**

3

**Number of Employees**

35

Victor Valley Wastewater Reclamation Authority (VWRA) serves a 279 square mile area that includes Apple Valley, Hesperia, Victorville, Spring Valley Lake and Oro Grande, California. The plant and employees treat about 10.7 million gallons of wastewater every single day.

To the average homeowner, it may come as some surprise to hear that wastewater is much more than what comes from your toilet. It includes water from sinks, showers, dishwashers and washing machines - anything that goes down the sewer pipe. VWRA takes that wastewater and sludge, and transforms it.

The wastewater that comes to the VWRA plant goes through an extensive cleaning and purification process before being returned to the Mojave River, or used in the cooling tower of a nearby power plant. Solids are put in large anaerobic digesters, where the resulting methane gas is used to help power that same power plant. VWRA is currently able to produce about 90% of its own energy needs with plans to become 100% energy neutral.

**Efficiency - in all operations - is critical to VWRA.**

To this end, in August of 2015 VWRA set out to determine the best and most efficient way to capture and preserve institutional knowledge, for immediate use and operational improvement, and as a resource for future operations. They sought a system that would be useful and accessible to every staff member. Through their research, the idea to move from paper log keeping to electronic log keeping was born. After much discovery, due diligence, and testing, VWRA selected eLogger as its vendor partner to provide electronic logbook software and support to VWRA.

eLogger went live in June of 2017 at VWRA and metrics were put in place to mark and measure achievements. Six months after startup, eLogger had been implemented at Apple Valley Sub Regional, Hesperia Sub Regional, all Interceptors and Collection Systems Structures, Industrial Dischargers, Pump Stations, Regional Plant and FOG/Septic Haulers.

*“VWRA is better informed and more knowledgeable about their operations as a result of using eLogger.”*

# eLogger

To put that into numbers, in just six months:

- 62 different categories of logs are being tracked
- VWVRA is fast approaching 10,000 entries in their new logbook software
- They have 28 active users that utilize the information that is entered into the system to make operational and regulatory decisions
- VWVRA Administrators created 91 different templates to track specific information
- VWVRA Administrators created 59 saved searches and reports so their users could quickly and efficiently capture information

At VWVRA, binders and spreadsheets in the control room are disappearing one at a time, and green ledger logbooks are a thing of the past. eLogger is now being used daily by operations, maintenance, E&I, MIS, and Pretreatment staff across all locations, which means that as an overall operation, VWVRA has unprecedented access to operational information. That information is better organized than ever before, and can be found faster and easier than ever before. AQMD and Stormwater regulatory compliance reports are better, faster, and more accurate. Operational meetings are more focused, due to better understanding of current issues and incidents, and a clear outline of current and completed tasks. The new employee learning curve has improved. Testing is rapidly being completed and the LOTO (Lock out/Tag out) process will be converted to eLogger.

VWVRA has come to recognize that capturing and preserving staff knowledge about plant processes, systems, and procedures is critical to their long-term operational success. This cannot be overstated: VWVRA is better informed and more knowledgeable about their operations as a result of using eLogger.

The future is bright for VWVRA. Thanks to the dedicated efforts of VWVRA staff, their expectations are that in 2018 eLogger will continue to become a more integral and rich knowledge center, improving the daily operations, communications, and efficiency of VWVRA.

## **About eLogger Inc.**

eLogger Inc. is an innovative technology company dedicated to developing solutions that address real-world business challenges in inventive, flexible ways.

Our eLogger electronic logbook solution replaces paper logbooks and disconnected systems—collecting and distributing real-time data about your operations to those who need to know.

In use by more than 100 facilities worldwide, eLogger Inc. solutions contribute to the safety, efficiency, and best-business practices of businesses in dozens of industries.
